

THE CRUISE COLLECTION

The Cruise Collection, whose architecture was designed by Cenk Doğan Architect, is located on a land of 10,720 m².

The building, which is 195 m long and 12 storey and inspired by the Cruise ship its creator, is nominated to be the best project of the region with its extraordinary architecture.

In the project, which includes 174 flats, including 1 office, 1+1's - 87 m², 2+1's 110 to 145 m² and 3+1's 163 to 186 m². All apartments are on the south side and also all of them see the social areas. Are you ready to go on a Cruise with luxury apartments with comfortable and spacious terraces on the upper floors, surrounded by social themes, where you can feel the gardens and villa life on the ground floors?

While we are feeling the effects of global warming and climate change more and more every day, we are adopting the sustainability philosophy in our project and using renewable energy systems in social facilities. We can generate the energy we will use in social areas ourselves, with 2 electric charging units in our indoor parking and solar panels located in the gardens.

Our collection is located 5 km from the world-famous Lara/Kundu hotels, 1 km from Antalya Airport, the center of tourism, 1 km from private schools, 4.5 km from shopping centers such as Mall of Antalya, Agora, Ikea. Feel the sea, sand and sun together at our beach, which is specially rented for The Cruise. We provide a free transfer service every two hours to our private and free beach, to key points such as the airport and shopping mall.

Let us consider all the details while you live. With our Concierge services that you can benefit from after the sale, we are always with you, from housekeeping system to veterinary services for your pets, from VIP car rental to hosting guests and private flat rental opportunities. Are you ready to keep a logbook on The Cruise, where you will feel the hotel service every day?
